Assay

■ Principle

The assay is based on the increase in absorbance at 500 nm as the formation of quinoneimine dye proceeds in the following reactions:

$$\text{Palmitoyl-CoA} + O_2 \xrightarrow{\text{ACOD}} \text{2-Hexadecenoyl-CoA} + H_2O_2$$

$$2\,H_2O_2 + \text{4-AA} + \text{Phenol} \xrightarrow{\text{POD}} \text{Quinoneimine dye} + 4\,H_2O$$

■ Unit definition

One unit is defined as the amount of enzyme which generates 1 μmole of H_2O_2 per minute at 37℃ under the conditions specified in the assay procedure.

■ Reagents

1. Reaction mixture

0.2 M Tris-HCl buffer pH 8.0	0.20 ml
15 mM 4-AA solution	0.10 ml
0.2% (W/V) Phenol solution	0.10 ml
50 U/ml POD solution [1)]	0.10 ml
1% (W/V) Triton X-100 solution	0.10 ml
5 mM Palmitoyl-CoA solution [2)]	0.10 ml
Distilled water	0.30 ml

1): 50 U/ml POD solution
Dissolve 500 U (PPU) of POD with 10 ml of distilled water.

2): 5 mM Palmitoyl-CoA solution
Dissolve 50.3 mg (purity calculation) of palmitoyl-CoA with 10 ml of 10 mM KH_2PO_4-NaOH buffer pH 7.0.

2. Enzyme dilution buffer
10 mM KH_2PO_4-NaOH buffer (pH 7.0) containing 3 mM ATP and 10 μM FAD

3. Reagents
4-AA: NACALAI TESQUE, INC. Special grade #01907-52
POD: Sigma Chemical Co. Type Ⅱ # P-8250
Triton X-100: The Dow Chemical Company
Palmitoyl-CoA: Asahi Kasei Pharma Corporation
ATP (2Na・3H_2O): Kyowa Hakko Co., Ltd.
FAD (2Na): Kyowa Hakko Co., Ltd.
ATP: Adenosine triphosphate
FAD: Flavine adenine dinucleotide

■ **Enzyme solution**

Accurately weigh about 20 mg of the sample and add enzyme dilution buffer to make a total of 20ml. Dilute it with enzyme dilution buffer to adjust the concentration to within 0.2–0.5 U/ml.

■ **Procedure**

1. Pipette accurately 1.0 ml of reaction mixture into a reaction cuvette (1 ml volume black cuvette) and preincubate at 37℃.
2. After 5 min, add 20 μl of enzyme solution and mix to start the reaction at 37℃.
   ※ In the case of a test blank, add 20 μl of enzyme dilution buffer in place of enzyme solution.
3. After starting the reaction, measure the rate of increase in absorbance at 500 nm. The rate must be measured within the linear portion of the absorbance curve.

Absorbance sample : As/min
blank : Ab/min
△A/min = (As/min − Ab/min) ≦ 0.060 Abs/min

■ **Calculation**

$$\text{Activity (U/mg of powder)} = \frac{\triangle\ \text{A/min}}{12.0 \times 1/2} \times \frac{1.02}{0.02} \times \frac{1}{X}$$

12.0 : millimolar extinction coefficient of quinoneimine dye at 500 nm (cm^2/ μmole)
1/2 : a multiplier derived from the fact that 2 mol of H_2O_2 produce 1 mol of quinoneimine dye
1.02 : final volume (ml)
0.02 : volume of enzyme solution (ml)
X : concentration of the sample in enzyme solution (mg/ml)

Storage

Storage at −20℃ in the presence of a desiccant is recommended. Enzyme activity will be retained for at least one year under this condition (Figure 4).
