Assay

■ Principle

The assay is based on the increase in absorbance at 500 nm as the formation of quinoneimine dye proceeds in the following reactions:

■ Unit definition

One unit is defined as the amount of enzyme which hydrolyzes 1 μ mole of phosphatidylcholine to phosphatidic acid and choline per minute at 37°C under the conditions specified in the assay procedure.

■ Reagents

1. Reaction mixture for the first reaction

0.1 M Tris-HCl buffer pH 8.0	0.20 ml
0.1 M CaCl ₂ solution	0.05 ml
25 mM substrate solution ¹⁾	0.10 ml

Distilled water 0.15 ml

1): 25 mM substrate solution

Dissolve 88.5 mg of 1,2-Dioleoyl-sn-glycero-3-phosphocholine with 4.5 ml of 5 % (W/V) Triton X-100 solution.

2. Reaction mixture for the second reaction

15 mM 4-AA solution	0.10 ml
0.2 % (W/V) Phenol solution	0.10 ml
60 mM EDTA pH 8.0	0.10 ml
50 mM Tris-HCl buffer pH 8.0	2.00 ml
90 U/ml POD solution ²⁾	0.10 ml
30 U/ml COD solution ³⁾	0.10 ml

EDTA: Ethylenediaminetetraacetic acid

2): 90 U/ml POD solution

Dissolve 900 U (PPU) of POD with 10 ml of distilled water.

3): 30 U/ml COD solution

Dissolve 300 U of COD with 10 ml of 10 mM Tris-HCl buffer pH 8.0.

3. Enzyme dilution buffer

10 mM Tris-HCl buffer (pH 8.0) containing 0.05% (W/V) BSA and 0.1% (W/V) Triton X-100

4. Reagents

Triton X-100: The Dow Chemical Company

 4-AA : NACALAI TESQUE, INC. Special grade #01907-52
 POD: Sigma Chemical Co. Type II #P-8250

■ Enzyme solution

Accurately weigh about 20 mg of the sample and add enzyme dilution buffer to make a total of 20 ml. Dilute it with enzyme dilution buffer to adjust the concentration as required.

■ Procedure

- Pipette accurately 0.50 ml of reaction mixture for the first reaction into a small test tube and preincubate at 37°C.
- After 5 min, add 50 μ l of enzyme solution and mix to start the reaction at 37°C.
- At 10 min after starting the reaction, add 2.50 ml of reaction mixture to the second reaction and mix to start the second reaction.
※ In the case of a blank test, add 50 μ l of enzyme dilution buffer solution at this time.
- At 20 min after starting the reaction, measure the absorbance at 500 nm.

Absorbance sample : As
 blank : Ab
 $\Delta A = (As - Ab) \leq 0.60$ Abs

■ Calculation

$$\text{Activity (U/mg of powder)} = \frac{\Delta A / 10}{12.2} \times \frac{3.05}{0.05} \times \frac{1}{X}$$

12.2 : millimolar extinction coefficient of quinoneimine dye
(cm² / μ mole)

10 : reaction time (min)

3.05 : final volume (ml)

0.05 : volume of enzyme solution (ml)

X : concentration of the sample in enzyme solution
(mg/ml)

Storage

Storage at -20°C in the presence of a desiccant is recommended. Enzyme activity will be retained for at least one year under this condition.
